Application No.: 10/584,359

Office Action dated: October 31, 2007

Response to Office Action dated: January 30, 2008

AMENDMENTS TO THE ABSTRACT

Please replace the Abstract with the following replacement Abstract, marked-up to show changes.

A shaft 30(30), in which all of a moving cylinder [[36]](36) and a deep groove ball bearing ball bearing 62(62) are assembled, and a reduction gear shaft [[73]](73) are assembled to a first shell [[12]](12) and then, a potentiosensor [[70]](70) is assembled to the first shell [[12]](12). A feed coupler is connected to a terminal [[50]](50), the driven gear [[72]](72) is rotated and adjusted to a predetermined sensor voltage value. The potentiosensor [[70]](70) is allowed to slide toward a worm wheel [[59]](59), and a large-diameter reduction gear [[74]](74) is meshed with a pinion [[76]](76).
